Background color:

- ☒ Without border  
☐ With border

Border style

Border color:

Create the styled paragraph

### Searching for a text

Search for a word:

Search

Clear Search

Here you should display the text in a paragraph with the above specified properties

Depending on the above suggestion, you must consider the following:

- You have to create a Text Area where you can write or put any text in it.
- In the styling paragraph area you have to select the text color and the background color of the paragraph and if it is with or without border.
- If the selection is without border, then the border style and border color should be disabled. If the selection is with border, then the border style and the border color should be enabled.
- The border styles in the list are: solid, dashed and dotted.
- By clicking on "Create the styled paragraph", you should insert the text ( in the text area) in a paragraph below with the selected style properties.
- By clicking on search (after putting a word to look for it), the paragraph that appeared below should highlight every matched word in it. If it is not exist it should display below that the word does not exist.
- By clicking on "Clear Search" you should remove all the highlights that appear on it from the last searching process.
- You should display the web page in a very similar way to the above suggestion.
