

## BONUS

Assignment 4: deadline: 17/12/2019

You are about to make a page for presenting hotel information.

The information must include: general information, history, gallery, location on google map, and contact information.

The information should be something like the information in the following link

<https://en.m.wikipedia.org/wiki/JavaScript>

### **This means:**

-Name of the hotel followed by a general information.

-Collapsed contents ( offer links to history, gallery, location and contact)

-Then, "History" that contains below it history information for the hotel, "Gallery" that contains below it different photos for the hotel, "Location" that contains below it the hotel location on google map. Finally, "contact" that includes below it information about the hotel phones and emails.

- The user can toggle between hiding and showing information in contents, history, gallery, location and contacts, depending on the user clicks on their titles.

-When the user clicks on any clickable title the cursor should be turned into pointer cursor.

- You are allowed to present the page in the way you prefer. Good marks will go for nice presentation (following Wikipedia style and color is not necessary at all).
